

Setup Guide - SQL Toolbelt Essentials

This guide covers installing the required software for the hands-on exercise. **If you're using a Demo VM provided by the presenter, skip this guide entirely.**

Prerequisites

- Windows 10/11 laptop with administrator access
 - Minimum 8GB RAM recommended
 - At least 10GB free disk space
-

Step 1: Install SQL Server Express

1. Download **SQL Server 2025 Express** from Microsoft:
 - **Direct link:** <https://go.microsoft.com/fwlink/p/?linkid=2216019>
 2. Run the installer and choose **Basic** installation type using defaults
 3. Accept the license terms and click **Install**
 4. Wait for installation to complete (5-10 minutes)
 5. Note the connection string shown at the end - the server name is typically `localhost\SQLEXPRESS`
-

Step 2: Install SQL Server Management Studio (SSMS)

1. Download **SSMS 20** from Microsoft:
 - **Direct link:** <https://aka.ms/ssmsfullsetup>
 2. Run the installer
 3. Click **Install** and wait for completion (5-10 minutes)
 4. Restart your computer if prompted
-

Step 2a: Configure SQL Server Network Settings (if needed)

Note: Only complete these steps if SSMS cannot connect to SQL Server.

To ensure SSMS can connect to SQL Server Express:

1. Open **SQL Server Configuration Manager**
 - Search for "SQL Server Configuration Manager" in the Start menu
2. Expand **SQL Server Network Configuration**
3. Click **Protocols for SQLEXPRESS**
4. Enable **TCP/IP** (right-click > Enable)
5. Enable **Named Pipes** (right-click > Enable)

6. Open **Services** (search "Services" in Start menu)
 7. Find **SQL Server Browser**, set it to **Automatic** and **Start** it
 8. Restart the **SQL Server (SQLEXPRESS)** service
-

Step 3: Install Redgate SQL Toolbelt Essentials

1. Download **SQL Toolbelt Essentials** from Redgate:
 - **Direct link:** <https://download.red-gate.com/installers/SQLToolbeltEssentials/2026-02-09/SQLToolbeltEssentials.exe>
 2. Run the installer
 3. Select **all components** to install
 4. Follow the installation wizard
 5. When prompted, sign in to the **Redgate licensing portal** to access your license or start a **14-day free trial**
-

Troubleshooting

Cannot connect to SQL Server

- Ensure SQL Server service is running (Services > SQL Server (SQLEXPRESS))
- Try `localhost\SQLEXPRESS` or `.\SQLEXPRESS` as server name
- Check Windows Firewall isn't blocking connections

SQL Toolbelt tools not appearing in SSMS

- Restart SSMS after installing the Toolbelt
- Check the Tools menu in SSMS for Redgate options

Script execution errors

- Ensure you're connected with a login that has sysadmin privileges
 - Run the script from the `master` database context
-

Once setup is complete, return to the main README to continue with the exercises.
